

## Rebreather Sizing Guide

Having the correct size counterlung and harness is essential. Please seek help from the factory if you are unsure of your size. Too small can be uncomfortable, too big can be dangerous.

**Note: Measurements without suits**

It is essential to keep the counterlungs down on your shoulders to avoid excessive hydrostatic imbalance. They are prevented from floating upwards by the Fastex buckle located on the lower edge of each counterlung. These can be fastened to the special connection points on the Harness. If these do not allow the counterlungs to remain on the shoulders then either a smaller breathing bag, or the use of crotch straps, must be considered.

### Back Mounted Counterlung Sizing

Two sizes of back mounted counterlungs are available: Small and Standard. All have sufficient volume for breathing.

In order to fit different body sizes it's position can be adjusted vertically by using the alternative mounting holes. It is essential to keep the counterlungs against your back and upper rear shoulder to avoid excessive hydrostatic imbalance.

**Select the back mounted counterlungs according to your body size.**
